

## AMENDMENTS TO THE CLAIMS

This listing of claims reflects all claim amendments and replaces all prior versions, and listings, of claims in the application. Material to be inserted is in **bold and underline**, and material to be deleted is in ~~strikeout~~ or (if the deletion is of five or fewer consecutive characters or would be difficult to see) in double brackets [[ ]].

### Listing of Claims:

1. (Currently Amended) A fuel processing system, comprising:

~~a fuel processor adapted to produce a product hydrogen stream containing hydrogen gas from a feed stream containing a carbon-containing feedstock, water and an odorant, wherein the odorant has a different composition than the carbon-containing feedstock, imparts to the feed stream an odor distinct from the carbon-containing feedstock, and is at least substantially free from sulfur compounds;~~

**a fuel processor adapted to produce a product hydrogen stream containing hydrogen gas from the feed stream;**

at least one reforming catalyst bed within the fuel processor and adapted to produce a mixed gas stream containing hydrogen gas and other gases from the feed stream; and

a separation region within the fuel processor and adapted to receive the mixed gas stream and to separate the mixed gas stream into a hydrogen-rich stream containing at least substantially hydrogen gas and a byproduct stream containing at least a substantial portion of the other gases, and further wherein the product hydrogen stream is formed from the hydrogen-rich stream.

2. (Original) The fuel processing system of claim 1, wherein the odorant is adapted to have a distasteful odor.

3. (Original) The fuel processing system of claim 1, wherein the odorant is volatile.

4. (Original) The fuel processing system of claim 1, wherein the odorant is at least substantially miscible in the carbon-containing feedstock.

5. (Original) The fuel processing system of claim 4, wherein the odorant is completely miscible in the carbon-containing feedstock.

6. (Original) The fuel processing system of claim 1, wherein the odorant has a boiling point of less than approximately 300° C.

7. (Original) The fuel processing system of claim 6, wherein the odorant has a boiling point of less than 200° C.

8. (Original) The fuel processing system of claim 1, wherein the odorant has a molecular weight of less than 1000.

9. (Previously Presented) The fuel processing system of claim 1, wherein the odorant is at least substantially free of phosphorous and heavy metals.

10. (Original) The fuel processing system of claim 9, wherein the odorant is free of sulfur.

11. (Original) The fuel processing system of claim 9, wherein the odorant is free of phosphorous.

12. (Original) The fuel processing system of claim 9, wherein the odorant is free of heavy metals.

13. (Original) The fuel processing system of claim 1, wherein the odorant is adapted to have a strong and readily detectable odor even when present in concentrations of approximately 10 ppm.

14. (Original) The fuel processing system of claim 1, wherein the odorant includes at least one organic amine having at least one amine functional group.

15. (Original) The fuel processing system of claim 14, wherein the odorant includes an organic amine selected from the group consisting of trimethylamine, triethylamine, tripropylamine, n-butylamine, n-pentylamine, n-hexylamine, n-heptylamine, n-octylamine, and n-decylamine.

16. (Original) The fuel processing system of claim 1, wherein the odorant includes at least one organic amine having at least two amine functional groups.

17. (Original) The fuel processing system of claim 16, wherein the at least one organic amine is selected from the group consisting of 1,3-diaminopropane, 1,4-diaminobutane, 1,5-diaminopentane, and 1,7-diaminoheptane.

18. (Withdrawn) The fuel processing system of claim 1, wherein the feed stream includes a first stream containing the carbon-containing feedstock and the odorant and a second stream containing the water.

19. (Cancelled)

20. (Original) The fuel processing system of claim 1, wherein the carbon-containing feedstock includes at least one hydrocarbon or alcohol.

21. (Original) The fuel processing system of claim 20, wherein the carbon-containing feedstock includes methanol.

22. (Original) The fuel processing system of claim 1, wherein the separation region is adapted to produce the hydrogen-rich stream and the byproduct stream by a pressure-driven separation process.

23. (Withdrawn) The fuel processing system of claim 22, wherein the separation region is adapted to produce the hydrogen-rich stream and the byproduct stream via a pressure-swing adsorption process.

24. (Previously Presented) The fuel processing system of claim 22, wherein the separation region includes at least one hydrogen-permeable membrane, and further wherein the hydrogen-rich stream is formed from a portion of the mixed gas stream that passes through the membrane and the byproduct stream is formed from a portion of the mixed gas stream that does not pass through the membrane.

25. (Original) The fuel processing system of claim 24, wherein the separation region includes a plurality of hydrogen-permeable membranes.

26. (Original) The fuel processing system of claim 24, wherein the hydrogen-permeable membrane comprises at least one of palladium and a palladium alloy.

27. (Original) The fuel processing system of claim 26, wherein the hydrogen-permeable membrane comprises a palladium-copper alloy.

28. (Withdrawn) The fuel processing system of claim 1, wherein the fuel processor further includes a polishing region adapted to receive the hydrogen-rich stream and to increase the purity of the hydrogen gas therein to produce the product hydrogen stream.

29. (Withdrawn) The fuel processing system of claim 28, wherein the polishing region includes a methanation catalyst bed.

30. (Withdrawn) The fuel processing system of claim 28, wherein the polishing region includes a permeate reforming catalyst bed containing a reforming catalyst.

31. (Withdrawn) The fuel processing system of claim 30, wherein the polishing region further includes a methanation catalyst bed downstream from the permeate reforming catalyst bed.

32. (Withdrawn) The fuel processing system of claim 1, further comprising a fuel cell stack adapted to receive at least a portion of the product hydrogen stream and including a plurality of fuel cells adapted to produce an electric current therefrom.

33. (Withdrawn) The fuel processing system of claim 32, wherein the fuel cell stack includes at least one proton exchange membrane fuel cell.

34. (Withdrawn) The fuel processing system of claim 32, wherein the fuel cell stack includes at least one alkaline fuel cell.

35. (Currently Amended) In a fuel processing system containing a fuel processor adapted to produce a product hydrogen stream comprising hydrogen gas from a feed stream comprising a carbon-containing feedstock that is a liquid at 25 degrees Celsius and 1 atmosphere pressure, and a fuel processor adapted to produce a product hydrogen stream comprising hydrogen gas, the improvement comprising: the feed stream further comprising an odorant comprising an organic amine having at least one amine functional group and a strong and detectable odor distinct from the carbon-containing feedstock.

36. (Original) The fuel processing system of claim 35, wherein the odorant is adapted to have a distasteful odor.

37. (Original) The fuel processing system of claim 35, wherein the odorant is volatile.

38. (Original) The fuel processing system of claim 35, wherein the odorant is at least substantially miscible with the carbon-containing feedstock.

39. (Original) The fuel processing system of claim 38, wherein the odorant is completely miscible with the carbon-containing feedstock.

40. (Original) The fuel processing system of claim 35, wherein the odorant has a boiling point of less than approximately 300° C.

41. (Original) The fuel processing system of claim 40, wherein the odorant has a boiling point of less than 200° C.

42. (Original) The fuel processing system of claim 35, wherein the odorant has a molecular weight of less than 1000.

43. (Original) The fuel processing system of claim 35, wherein the odorant is at least substantially free of sulfur, phosphorous, and heavy metals.

44. (Original) The fuel processing system of claim 43, wherein the odorant is free of sulfur.

45. (Original) The fuel processing system of claim 43, wherein the odorant is free of phosphorous.

46. (Original) The fuel processing system of claim 43, wherein the odorant is free of heavy metals.

47. (Original) The fuel processing system of claim 35, wherein the odorant is adapted to have a strong and readily detectable odor even when present in concentrations of approximately 10 ppm.

48. (Cancelled)

49. (Previously Presented) The fuel processing system of claim 35, wherein the odorant includes an organic amine selected from the group consisting of trimethylamine, triethylamine, tripropylamine, n-butylamine, n-pentylamine, n-hexylamine, n-heptylamine, n-octylamine, and n-decylamine.

50. (Original) The fuel processing system of claim 35, wherein the odorant includes at least one organic amine having at least two amine functional groups.

51. (Original) The fuel processing system of claim 50, wherein the at least one organic amine is selected from the group consisting of 1,3-diaminopropane, 1,4-diaminobutane, 1,5-diaminopentane, and 1,7-diaminoheptane.

52. (Original) The fuel processing system of claim 35, wherein the carbon-containing feedstock includes at least one hydrocarbon or alcohol.

53. (Original) The fuel processing system of claim 35, wherein the fuel processor is adapted to produce the product hydrogen stream via catalytic partial oxidation of the feed stream.

54. (Original) The fuel processing system of claim 35, wherein the feed stream further includes water.

55. (Original) The fuel processing system of claim 54, wherein the fuel processor includes at least one reforming region containing a reforming catalyst and adapted to produce a reformat stream from the feed stream.

56. (Original) The fuel processing system of claim 55, wherein the reforming catalyst is a steam reforming catalyst and the fuel processor is adapted to produce the reformat stream by steam reforming.

57. (Original) The fuel processing system of claim 55, wherein the reforming catalyst is an autothermal reformer and the fuel processor is adapted to produce the reformat stream by autothermal reforming.

58. (Original) The fuel processing system of claim 35, wherein the fuel processor includes a hydrogen-producing region that is adapted to receive the feed stream and to produce a mixed gas stream containing hydrogen gas and other gases therefrom, and further wherein the fuel processor further includes a separation region in which the mixed gas stream is separated into a hydrogen-rich stream containing at least substantially hydrogen gas and a byproduct stream containing at least a substantial portion of the other gases.

59. (Withdrawn – Previously Presented) The fuel processing system of claim 58, wherein the separation region is adapted to produce the hydrogen-rich stream and the byproduct stream via a pressure-swing adsorption process.

60. (Previously Presented) The fuel processing system of claim 58, wherein the separation region includes at least one hydrogen-permeable membrane, and further wherein the hydrogen-rich stream is formed from a portion of the mixed gas stream that passes through the membrane and the byproduct stream is formed from a portion of the mixed gas stream that does not pass through the membrane.

61. (Original) The fuel processing system of claim 60, wherein the separation region includes a plurality of hydrogen-permeable membranes.

62. (Original) The fuel processing system of claim 60, wherein the hydrogen-permeable membrane comprises at least one of palladium and a palladium alloy.

63. (Original) The fuel processing system of claim 62, wherein the hydrogen-permeable membrane comprises a palladium-copper alloy.

64. (Original) The fuel processing system of claim 58, wherein the product hydrogen stream is formed from the hydrogen-rich stream.

65. (Withdrawn) The fuel processing system of claim 58, wherein the fuel processor further includes a polishing region adapted to receive the hydrogen-rich stream and to increase the purity of the hydrogen gas therein to produce the product hydrogen stream.

66. (Withdrawn) The fuel processing system of claim 65, wherein the polishing region includes a methanation catalyst bed.

67. (Withdrawn) The fuel processing system of claim 65, wherein the polishing region includes a permeate reforming catalyst bed containing a reforming catalyst.

68. (Withdrawn) The fuel processing system of claim 67, wherein the polishing region further includes a methanation catalyst bed downstream from the permeate reforming catalyst bed.

69. (Withdrawn) The fuel processing system of claim 35, further comprising a fuel cell stack adapted to receive at least a portion of the product hydrogen stream and containing a plurality of fuel cells adapted to produce an electric current therefrom.

70. (Withdrawn) The fuel processing system of claim 69, wherein the fuel cell stack includes at least one proton exchange membrane fuel cell.

71. (Withdrawn) The fuel processing system of claim 69, wherein the fuel cell stack includes at least one alkaline fuel cell.

72-78. (Cancelled)

79. (Previously Presented) The fuel processing system of claim 35, wherein the carbon-containing feedstock includes at least one alcohol.

80. (Previously Presented) The fuel processing system of claim 79, wherein the carbon-containing feedstock includes methanol.

81. (Previously Presented) A fuel processing system, comprising:

a feed stream comprising:

water,

a carbon -containing feedstock comprising a hydrocarbon or an alcohol, the carbon-containing feedstock being colorless and liquid at 25 degrees Celsius and 1 atmosphere pressure; and

an organic amine additive having at least one amine functional group and a boiling point less than approximately 300 degrees Celsius for imparting a characteristic odor distinct from the carbon-containing feedstock;

a fuel processor adapted to produce a product hydrogen stream containing hydrogen gas from the feed stream;

at least one reforming catalyst bed within the fuel processor adapted to produce a mixed gas stream containing hydrogen gas and other gases from the feed stream; and

a separation region within the fuel processor and adapted to receive the mixed gas stream and to separate the mixed gas stream into a hydrogen-rich stream containing at least substantially hydrogen gas and a byproduct stream containing at least a substantial portion of the other gases, and further wherein the product hydrogen stream is formed from the hydrogen-rich stream.

82. (Previously Presented) The fuel processing system of claim 81, wherein the organic amine additive is substantially free of sulfur, phosphorous, and heavy metal compounds such that the organic amine additive is adapted to not poison the at least one reforming catalyst bed within the fuel processor.

83. (Previously Presented) The fuel processing system of claim 81, wherein the organic amine additive is selected from the group consisting of trimethylamine, triethylamine, tripropylamine, n-butylamine, n-pentylamine, n-hexylamine, n-heptylamine, n-octylamine, n-decylamine, 1,3-diaminopropane, 1,4-diaminobutane, 1,5-diaminopentane, and 1,7-diaminoheptane.

84. (Previously Presented) The fuel processing system of claim 83, wherein the feed stream includes a second additive distinct from, and in addition to, the organic amine additive, and further wherein the second additive is selected from the group consisting of trimethylamine, triethylamine, tripropylamine, n-butylamine, n-pentylamine, n-hexylamine, n-heptylamine, n-octylamine, n-decylamine, 1,3-diaminopropane, 1,4-diaminobutane, 1,5-diaminopentane, and 1,7-diaminoheptane.

85. (Previously Presented) The fuel processing system of claim 81, wherein the carbon-containing feedstock consists essentially of at least one alcohol.

86. (Previously Presented) The fuel processing system of claim 85, wherein the carbon-containing feedstock consists essentially of methanol.
